- Reduce costs
- Incident investigation and response
- Remediate security incidents faster
- Improve data access and management
- Compliance reporting and auditing
- Better log analysis and retention

## See the bigger picture with SIEM

### What is SIEM and how does it work?

SIEM, which stands for Security Information Event Management, is a centralised software solution that offers real-time monitoring and analysis of events within your IT infrastructure. It also centrally collects data across the network and highlights and logs any security incidents it detects.

### SIEM as a Service

Rather than implementing and managing a SIEM solution in-house, you can entrust Covenco to do this for you. As your trusted partner for data protection and availability, Covenco can offer fully managed SIEM services providing you with the peace of mind that your IT environments are monitored 24 hours a day, 365 days a year.

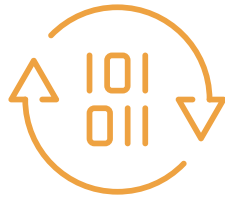

## Covenco's fully managed SIEM service offers cost-effective, multi-layered, real-time cyber threat protection.

The service helps with real-time security monitoring by centrally collecting data across your network and highlighting security incidents that are detected. These incidents are monitored 24/7, 365 days a year, ensuring that any cyber threats to your business are detected, isolated, and remediated almost immediately.

Malicious Insiders

Data Theft/Deletions

Advanced Persistent Threats

Zero-day Attacks

### We offer fully our managed SIEM service through our Security Operation Centre (SOC) and includes:

- MSSP delivered SIEM
- Cyber Threat Intelligence
- Host Based Agents
- 24 x 7 Eyes on Screen Detection & Monitoring Service
- Threat Intelligence Correlation
